WHEELCHAIR CUSHIONS

GU

Anatomically Intelligent Design
(Shown above with AireFlow™ cover and insert removed.)

GU Features:

- Gentle contours and multi-density construction for enhanced pelvic stability
- AireFlow™ technology design helps to reduce heat, moisture and shear
- Clinical breakthrough in skin protection and Cool Comfort™

AireRx™ AireFlow™ GU Cushion

AireRx™ wheelchair cushions provide the state-of-the-art in Anatomically Intelligent Design, select component materials, superior contours for optimal pressure distribution and relief to help prevent skin ulcers. All AireRx™ cushions feature AireFlow™ technology, protecting your skin by removing built-up body heat and moisture, major contributors to the risk of skin ulcers.

Anatomically Intelligent Design

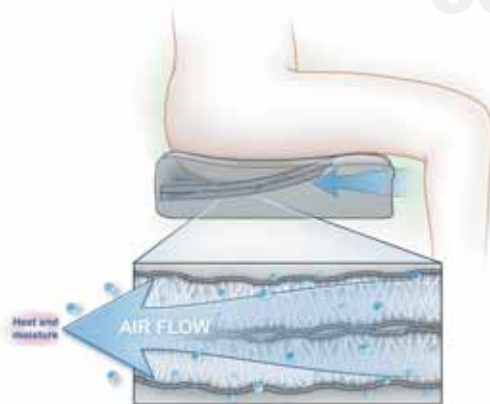

The AireFlow™ GU provides stable posture and optimal comfort. The improved stability, supported by high density foam bolsters, redistributes the user's weight away from high risk pressure points, resulting in lowered skin ulcer risk.

AireFlow™ Technology

Utilizing our "Dual Density Spacer Fabric," the AireFlow™ GU delivers Cool Comfort™, reducing heat buildup while keeping skin drier—two factors directly linked to skin ulcer development.

In addition to our unique fabric, which will not absorb liquids, the cushion's front to rear contour channels fluids away from the user in the event of an incontinence episode, further promoting skin protection.

All AireRx™ AireFlow™ cushions deliver... **Cool Comfort!**
an overdue clinical breakthrough™
